

ELBOW – PEDIATRIC (10 years and under)

- * AP with humerus & forearm in the same plane.
 - * If forearm cannot be extended due to severe pain or the elbow is casted, do an AP distal humerus, and do an AP proximal forearm

- * LATERAL (forearm flexed 90°) with humerus & forearm in the same plane. High Detail Film Technique. Central ray directed at the joint for true lateral.

- * AP OBLIQUE (EXT ROTATION) so that radial head is not overlapping the ulna
