

## FOREIGN BODY

- \*On adults AP or PA & true lateral of the part involved. As per part.
- \*If entry wound - on wound entrance, place a small (2mm max diam) lead marker on the site of interest and then do views. Identify the marker on the film.
- \*View with Central Ray Tangent to entry wound and a view 90° from that view.
- \*On Long bones, include at least one joint (for purposes of orientation).
- \*If foreign body is expected, do two views with an entry wound marker in place properly marked as such & one view tangent to entry wound marker.
