

IMAGING PROTOCOL BOOK TRA/MULTICARE

MultiCare 

Prepared and Submitted for final review by:

Radiologist - Lawrence Tang MD and Zubeir Jaffer MD

Imaging Quality Manager - Jeffery Perez DHA RT(R)

Imaging Supervisor – Tracy Armstrong RT(R)(CT)

Imaging Lead Tech - Sandi McInerney BS RT(R)(VI)

Submitted for Final - review/approval: 1/2023

TRA/MultiCare Imaging Protocol

- **Procedure Guidelines for General Radiology**

- This manual is intended as a guideline and standard for the **General Radiology** Technologist and support staff working in any of the Multicare or TRA Radiology Departments; for or under the direction of the **TRA RADIOLOGISTS**.

- **This Manual was Instructed, Reviewed and Approved by:**

- Douglas Seiler MD - Senior Radiologist
- Lawrence Tang MD - MSK Radiologist
- Zubeir Jaffer MD - Pediatric Radiologist
- Jill Taylor - AVP Acute Imaging Services
- Jeffrey Perez – Imaging Quality
- Tracy Armstrong RT(R)(CT)
- Sandi McInerney BS RT(R)(VI)

ARRT Standard of Ethics

Remember to strive to provide quality in your imaging and to always advocate for your patients. Please review the ARRT standard of ethics copied below and highlighted for emphasis.

1. The Registered Technologist acts in a professional manner, responds to patient needs and supports colleagues and associates, in providing quality care.
2. The Registered Technologist acts to advance the principal objective of the profession to provide services to humanity with full respect for the dignity of mankind.
3. The Registered Technologist delivers patient care unrestricted by concerns for personal attributes or the nature of disease or illness, and without discrimination based on race, color, creed, religion, national origin, sex, marital status, disability, sexual orientation, gender identity, veteran status or any other legally protected status.
4. The Registered Technologist practices technology founded on theoretical knowledge and concepts, uses equipment and accessories consistent with the purposes for which they were designed and employs procedures and techniques appropriately.
5. **The Registered Technologist assesses situations; exercises care, discretion, and judgement; assumes responsibility for professional decisions; and acts in the best interest of the patient.**
6. The Registered Technologist acts as an agent through observation, and communication to obtain pertinent information for the physician to aid in the diagnosis and treatment of the patient and recognizes that interpretation and diagnosis are outside the scope of practice for the profession.
7. The Registered Technologist uses equipment and accessories, employs techniques and procedures, performs services in accordance with an accepted standard of practice, and demonstrates expertise in minimizing radiation exposure to the patient, self and other members of the healthcare team.
8. The Registered Technologist practices ethical conduct appropriate to the profession and protects the patients right to quality radiologic technology care.
9. The Registered Technologist respects confidences entrusted during professional practice, respects the patient's right to privacy, and reveals confidential information only as required by law or to protect the welfare of the individual or the community.
10. The Registered Technologist continually strives to improve knowledge and skills by participating in continuing education and professional activities, sharing knowledge with colleagues, and investigating new aspects of professional practice.
11. The registered Technologist refrains from the use of illegal drugs and/or any legally controlled substances which result in impairment of professional judgement and/or ability to practice radiologic technology with reasonable skill and safety to patients.

Quality Assurance / Workflow Intelligence

The following tools are in place in the Workflow Intelligence Pacs system. To implement the standards highlighted within this approved protocol, our Radiologists, Managers and Lead Techs use these guidelines to assess and direct performance standards.

<ul style="list-style-type: none">• Positioning	<ul style="list-style-type: none">• Required anatomy all present and centered in each image• Requested views all present• Removal of all external artifacts• Motion addressed in notes or repeated• Pacs presentation as requested
<ul style="list-style-type: none">• Exposure	<ul style="list-style-type: none">• Review the Exposure Index range for over/under exposure
<ul style="list-style-type: none">• Documentation	<ul style="list-style-type: none">• Appropriate history is present including mechanism of injury with trauma
<ul style="list-style-type: none">• Labeling	<ul style="list-style-type: none">• Images are correctly marked right, left, upright or supine etc. Digitally marked images include tech initials.
<ul style="list-style-type: none">• Protocol	<ul style="list-style-type: none">• Requested protocols are followed unless documentations supports the submitted imaging
<ul style="list-style-type: none">• Collimation	<ul style="list-style-type: none">• Images are collimated to body part
<ul style="list-style-type: none">• Delayed Presentation	<ul style="list-style-type: none">• Images submitted to Radiologist in a timely manner

	Gastrografin challenge

CHEST / ABDOMEN : PACS PRESENTATION

Images should be properly marked with tech initials and oriented as listed below
Before sending to PACS for Radiologist interpretation:

Chest/Ribs

PA/AP Chests orient anatomic left chest right monitor

Lateral chests orient with the anterior chest facing left side of monitor

Annotate upright or supine

Abdomen

All abdominal images orient anatomic as patient is upright, annotate position

- **Repeats for clipped anatomy need lower or upper Half of chest with missing region**
 - **NOT a small strip of missing apices, angles**
 - **Additional views should be labeled: 1 of 2 / 2 of 2**

CHEST 2 View PA/AP Lateral

Projections:

Chest	<ul style="list-style-type: none"> • PA/AP • Left Lateral – <i>this projection will now be oriented to hang with the spine to the right of the screen – patient facing left screen</i>
	<ul style="list-style-type: none"> • Entire lung fields, apices to costophrenic angles
	<ul style="list-style-type: none"> • No rotation: sternal ends symmetric
	<ul style="list-style-type: none"> • Deep 9 Rib inspiration if possible
	<ul style="list-style-type: none"> • Technical factors support superior thoracic vertebrae visible through heart shadow on PA/AP
<ul style="list-style-type: none"> • Repeats for clipped anatomy need lower or upper HALF of chest with missing region <ul style="list-style-type: none"> • NOT a small strip of missing apices, angles • Additional views should be labeled: 1 of 2 / 2 of 2 	

Chest AP Portable

Projections:	
Chest	AP Portable
	Entire lung fields, apices to costophrenic angles
	No rotation: sternal ends symmetric
	Deep 9 rib inspiration if possible
	<ul style="list-style-type: none">• Grid required for any patient over 200 lbs., increase technique for grid use - Technical factors support visualization of superior thoracic vertebrae visible through heart shadow – when possible, move wires out of direct lung visualization
<ul style="list-style-type: none">• Repeats for clipped anatomy need lower or upper HALF of chest with missing region<ul style="list-style-type: none">• NOT a small strip of missing apices, angles• Additional views should be labeled: 1 of 2 / 2 of 2	

Chest Post Procedure

Projections:	
Chest	<ul style="list-style-type: none"> AP Portable or PA upright <ul style="list-style-type: none"> For Post Picc if line is not observed include Oblique RPO for AP port or LAO for PA upright (remove grid for portable) <ul style="list-style-type: none"> Darken ROI over distal line on second image
	<ul style="list-style-type: none"> Entire lung fields, apices to costophrenic angles
	<ul style="list-style-type: none"> Grid required for any patient over 200 lbs., increase technique for grid use - Technical factors support visualization of superior thoracic vertebrae visible through heart shadow – when possible, move wires out of direct lung visualization

Sternum

Projections:	
Sternum – 2 views	<ul style="list-style-type: none">• RAO• Lateral
RAO	<ul style="list-style-type: none">• Entire sternum projected over heart• Blurred pulmonary markings/shallow breathing
Lateral	<ul style="list-style-type: none">• Manubrium free of shoulder/rib superimposition

Ribs - Unilateral / Right or Left

Projections:

<ul style="list-style-type: none"> • Ribs - Unilateral 3+ views 	<ul style="list-style-type: none"> • <u>PA Chest,</u> • AP/PA upper and lower (<i>affected side only</i>) • Oblique upper and lower (<i>affected side only</i>)
	<ul style="list-style-type: none"> • Use 72" SID and 70-75 kVp for bony contrast upper ribs • Use 40" SID for lower ribs • Place BB at Site of pain

*Any Rib orders without chest should be changed (protocol) unless patient had a same day 2 view chest exam

Ribs Bilateral

Projections:

Ribs - Bilateral	Protocol: <ul style="list-style-type: none"> • <u>PA Chest,</u> • AP/PA upper and lower – bilateral single image • Oblique upper and lower ribs single image bilaterally
	<ul style="list-style-type: none"> • Use 72" SID and 70-75 kVp for bony contrast upper ribs • Use 40" SID for lower ribs increase kVp • Place BB at Site of pain

*Any Rib orders without chest should be changed (protocol) unless patient had a same day 2 view chest exam

Abdomen / KUB

Projections:	
Abd/ KUB – 1 view	<ul style="list-style-type: none"> AP supine
	<ul style="list-style-type: none"> Include entire abdomen symphysis to just below diaphragm – portrait or landscape as pictured here with spine centered.
	<ul style="list-style-type: none"> **When quadrant images required: Additional images as needed to include all bowel.

OR:

Abdomen Series / Abdomen 2 view

Projections:	
Abd Series	<ul style="list-style-type: none"> • PA/AP chest • Erect OR decubitus – left side down • Supine
Abdomen - 2 view	<ul style="list-style-type: none"> • Erect OR decubitus – left side down • Supine abdomen
	<ul style="list-style-type: none"> • Erect or Decub - include diaphragm down(do not need symphysis) • Supine: Include entire abdomen symphysis up to just below diaphragm(do not need entire diaphragm)

OR:

Abdomen Pediatric Foreign Body Localization

Projections:

Abd for FB:	<ul style="list-style-type: none"> • AP supine • Lateral Soft tissue Neck
	<ul style="list-style-type: none"> • Include entire chest/abdomen nose to rectum on AP • Multiple images ok if patient does not fit.

KUB for Feeding Tube Placement

Projections:	
KUB Feeding Tube	<ul style="list-style-type: none">• Supine (Ch)abdomen
	<ul style="list-style-type: none">• Center over left mid abdomen and chest do not need symphysis<ul style="list-style-type: none">• Include carina to be sure tube is not in airway• Technical factors optimal for both chest and abdomen visualization of the feeding tube• Move wires out of view if possible

Tube Verification Check with Injection

Projections:

• Tube Verification- 3 views

- Supine Kub pre and post injection
- Lateral post injection

- Scout Kub - Center over mid abdomen - do not need symphysis, then:
 - Inject **15 ml** Gastrografin in single port OR **J side if dual port**
 - *Tubes pictured here*
 - **DO NOT** access Balloon side of Tube
- Second AP without changing position after injection
- Lateral can be x-table or true lateral. Increase technical factors

• Note any difficulty injecting in tech notes for radiologist/IR

MIC-KEY® G

MIC-KEY® GJ

Gastrografin Challenge

Protocol:	
Oral Contrast	<ul style="list-style-type: none"> Scout – no need to call rad with scout images <ul style="list-style-type: none"> Administer 90 ml Gastrografin full strength as quick as patient can drink safely
Via NG tube	<ul style="list-style-type: none"> Scout - obtain scout images - contact rad to Verify NG tube placement is still in position prior to injection <ul style="list-style-type: none"> If no rad on duty call TRA Inject and administer 90 ml Gastrografin full strength and flush with 30 ml water to clear tube <ul style="list-style-type: none"> Inject at a rate tolerable and comfortable to patient Attach STOP suction sticker to NG tube if applicable
Both Oral and NG	<ul style="list-style-type: none"> Immediate image – note time on image and in Epic <ul style="list-style-type: none"> Ancillary Note in chart for patient to remain NPO for 6-8 hrs (no dilution of contrast) Timing of images flexible per site and reason for exam; can be done at 6 and 12 hours, 12 and 24 hours or timing requested by Ordering MD - Note the timing on the images <ul style="list-style-type: none"> If or When contrast is in colon finalize the exam and close for review in Pacs – do not assign to specific radiologist if unsure or contrast doesn't pass, please consult any radiologist Technologists responsible for written communication between shifts for timing requirements on images and status of exam
